Languages

Español: Native
English: High
Català: Bilingual

As a passionate FullStack Developer, my expertise spans API creation and development, with a keen interest in prototyping projects. I engage deeply in every detail, employing methods like sprint design for rapid and effective conceptualization. Capable of handling complete project development, I have experience in teamwork and making crucial decisions in various settings. My approach is grounded in agile practices and sound techniques like TDD, GIT, and methodologies such as Kanban and Scrum, always focusing on scalability and efficiency.

MY STACK TECHS ARE

Frontend Technologies

TypeScript	React	Tailwind CSS	Next JS	Gatsby	React Native
⊙ 3 Years	⊙ > 4 Years	⊙ 3 Years	⊙ 3 Years	⊙ 2 Years	⊙ 1 Year

Jest/Cypress	Jquery
⊙ 3 Years	⊙ > 4 Years

Backend Technologies

Node JS	Nest JS	Firebase	MongoDB	Go lang	TensorFlowJS
⊙ > 4 Years	⊙ 3 Years	⊙ 3 Years	⊙ 3 Years	⊙ 1 Year	⊙ 1 Year

MySQL & ORM	AWS	GCP	Heroku
⊙ > 4 Years	⊙ 2 Years	⊙ 3 Years	⊙ 3 Years

I have also worked and developed with other technologies:

EXPERIENCE

LambdaLoopers — October2023 - January 2024

FullStack Developer

I developed key functionalities for the backoffice of a metrics platform, using Strapi and Azure Functions in the backend and React in the frontend. I implemented PDF report modules and dashboards with Highcharts, in addition to integrating the Microsoft Graph API for user monitoring.

Union Avatars — May2023 - October 2023

FullStack Developer

At Union Avatars, as a FullStack Developer, I worked on developing the frontend with React and the backend with Python for a 3D avatar model converter. I implemented a 3D viewer in the frontend for previewing and selecting avatar animations, which were also used to display NFTs on OpenSea. I contributed to the integration of analytics systems with Datadog RUM and Google Analytics. I participated in optimizing and debugging an avatar and costume selector developed in Vue, and assisted in its transition to React, implementing improvements such as Zustand, SSR, and developing a Storybook UI

Embat Technologies SL — May2022 - February 2023

FullStack Developer

At Embat Technologies, I focused on creating new features and modules for the Embat app, notably a treasury management module for business holdings and scenario forecasting. My work involved React development, creating a comprehensive Storybook, and utilizing Recharts for various types of responsive, optimized charts. I built modular tables for treasury data visualization and diverse charting, ensuring efficient performance through VirtualDOM. Additionally, I developed the backend using Google Cloud Functions, enhancing overall functionality and scalability.

MVST. — February 2022 - May 2022

FullStack Developer

At MVST, I developed a website for an investment bank in Berlin, using NextJS, React, and Node for the frontend, and Ruby along with Strapi for the backend. My main project was creating an evaluation tool for rating and contacting the company based on their data. Additionally, the project utilized GraphQL for handling translations and page content. While the concept was basic, I contributed a crucial functionality to the website.

Amaris Consulting & innovation SL
April 2021 - February 2022

Ref: Saita Giovanni, Project Manager, +34 695 947 076

FullStack Developer, NodeJS and React Consultor
At AXA, I led the deployment, development, and scaling of a chatbot management application and dashboard, widely used in Asia and Europe. Utilizing NLP.js, an open-source AI tool from Microsoft, I developed a daily backup system for chatbots and an innovative dashboard graph for intuitive user pathway visualization and real-time issue detection. This dashboard was integral for varied global uses, including calls and automated chats on diverse platforms like mobile and social networks.

1d3a SL
March 2020 - December 2020

Ref: Joan Carbó Laguna, CTO, +34 607 700 297 - juan.carbo@1d3a.com

FullStack Developer
At 1d3a SL, I engaged in the integration of APIs and applications using JS, NodeJS, and PHP. I developed a 3D virtual whiteboard for sports strategies, used by teams like Futbol Club Barcelona. Additionally, I created a video editing tool for coaches and supported the integration of this technology into apps for managing sports teams.

Ibermática SA
January 2020 - March 2020

Ref: Juan Miguel Barajas, Project Manager +34 606 428 989

At Ibermática, I created a 3D virtual sports board for 1d3a S.L using ThreeJS, WebGL, and NodeJS. My work garnered positive feedback from the client, leading to a direct engagement to continue the development and expansion of the project. This included tackling more complex aspects and other related applications

Hard Monkey PC Ltd.
January 2017 - January 2019

I founded Hard Monkey PC, a programming agency focused on assisting SMEs in developing their online presence. My services included web design and development, digital marketing, as well as custom WordPress site and plugin development. I was also responsible for creating and selling dedicated servers in collaboration with LiquidNet Ltd., and developing websites using PHP with frameworks like Laravel and CodeIgniter, in addition to JavaScript technologies such as React and NodeJS

Sirastudio SL
January 2017 - December 2017

Ref: Marc Torrente Cesteros, CEO +34 616 248 949

At Sirastudio, I focused on custom WordPress and PrestaShop website development, including the creation of specific plugins and themes. I also set up optimized servers for WordPress and developed PHP scripts, providing comprehensive web solutions to clients
