Català:bilingual

I am programming for a few years now, with both backend and frontend technologies, and know how to integrate them and communicate between the two, and also how to develop and build APIs.

I always use agile methods and good practices like TDD, GIT, Kanban or Scrum, wireframming and mockups of high definitions, POP (Prototype-based programming) and OOP (Object-oriented programming), I like to define DTO's, entities and work in an encapsulated way, for a better scalability of the infrastructure. Following principles of DDD (Domain driven design)
